

Transport and social exclusion in the North of England

Questions for today

- How well does the transport system meet the needs of different groups?
- What does it mean to be socially excluded by transport issues?
- How can we measure social exclusion because of transport issues?
- How does this impact the North East and Cumbria?

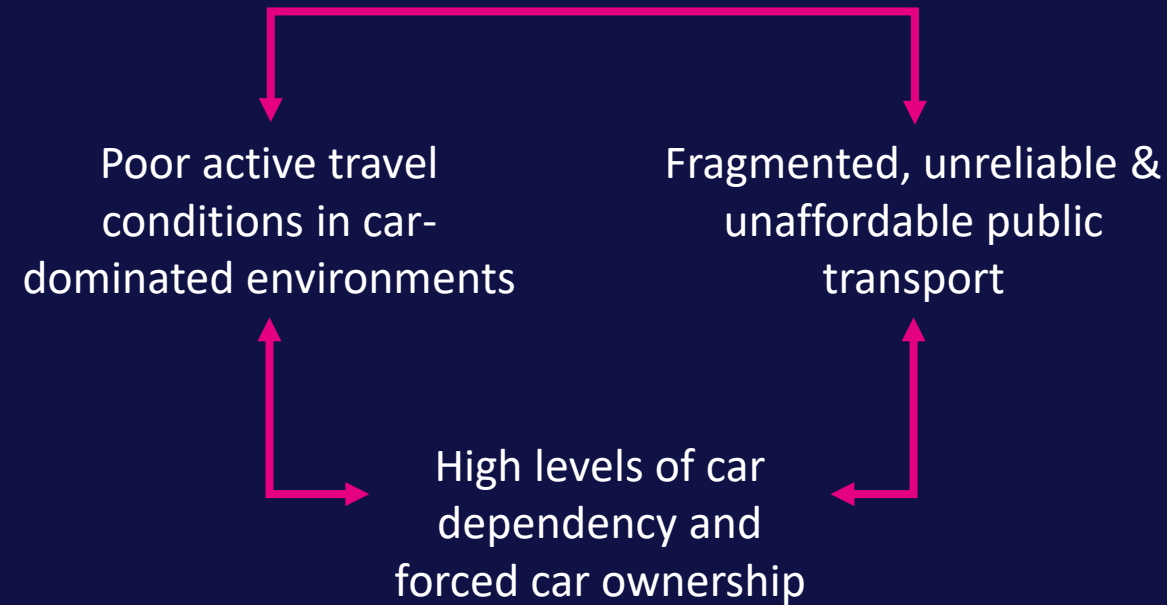

The research and strategy

Defining TRSE

- Two dimensions of *transport-related social exclusion*:
 - (1) Limited access to work & education opportunities, key services, and community life.
 - (2) The knock-on consequences of the required level of transport use – cost, stress, and time.

A vicious cycle

Distributional impacts

- Low income & insecure work
- Disability & long term health conditions
- Caring responsibilities
- Reinforcing broader inequalities: Gender, ethnicity, age, sexuality.

"I was earning £8 an hour, four hours a day, and the fare was £4.50 each way - so a quarter went on fares. It wasn't worth it in the end."

"My son works in an office and if his train's late nothing happens to him, but I lose pay."

Data Tool structure

Accessibility analysis

DfT journey time statistics (2019)

Major employer; primary, secondary & further education; GP surgeries & hospitals; town centres

Access, journey times, number of destinations

Vulnerability analysis

English Indices of Deprivation (2019)

Adjusted & reweighted to match to accessibility domains (jobs, education, health, basic services)

Transformed domain score for each domain

TRSE Risk Category

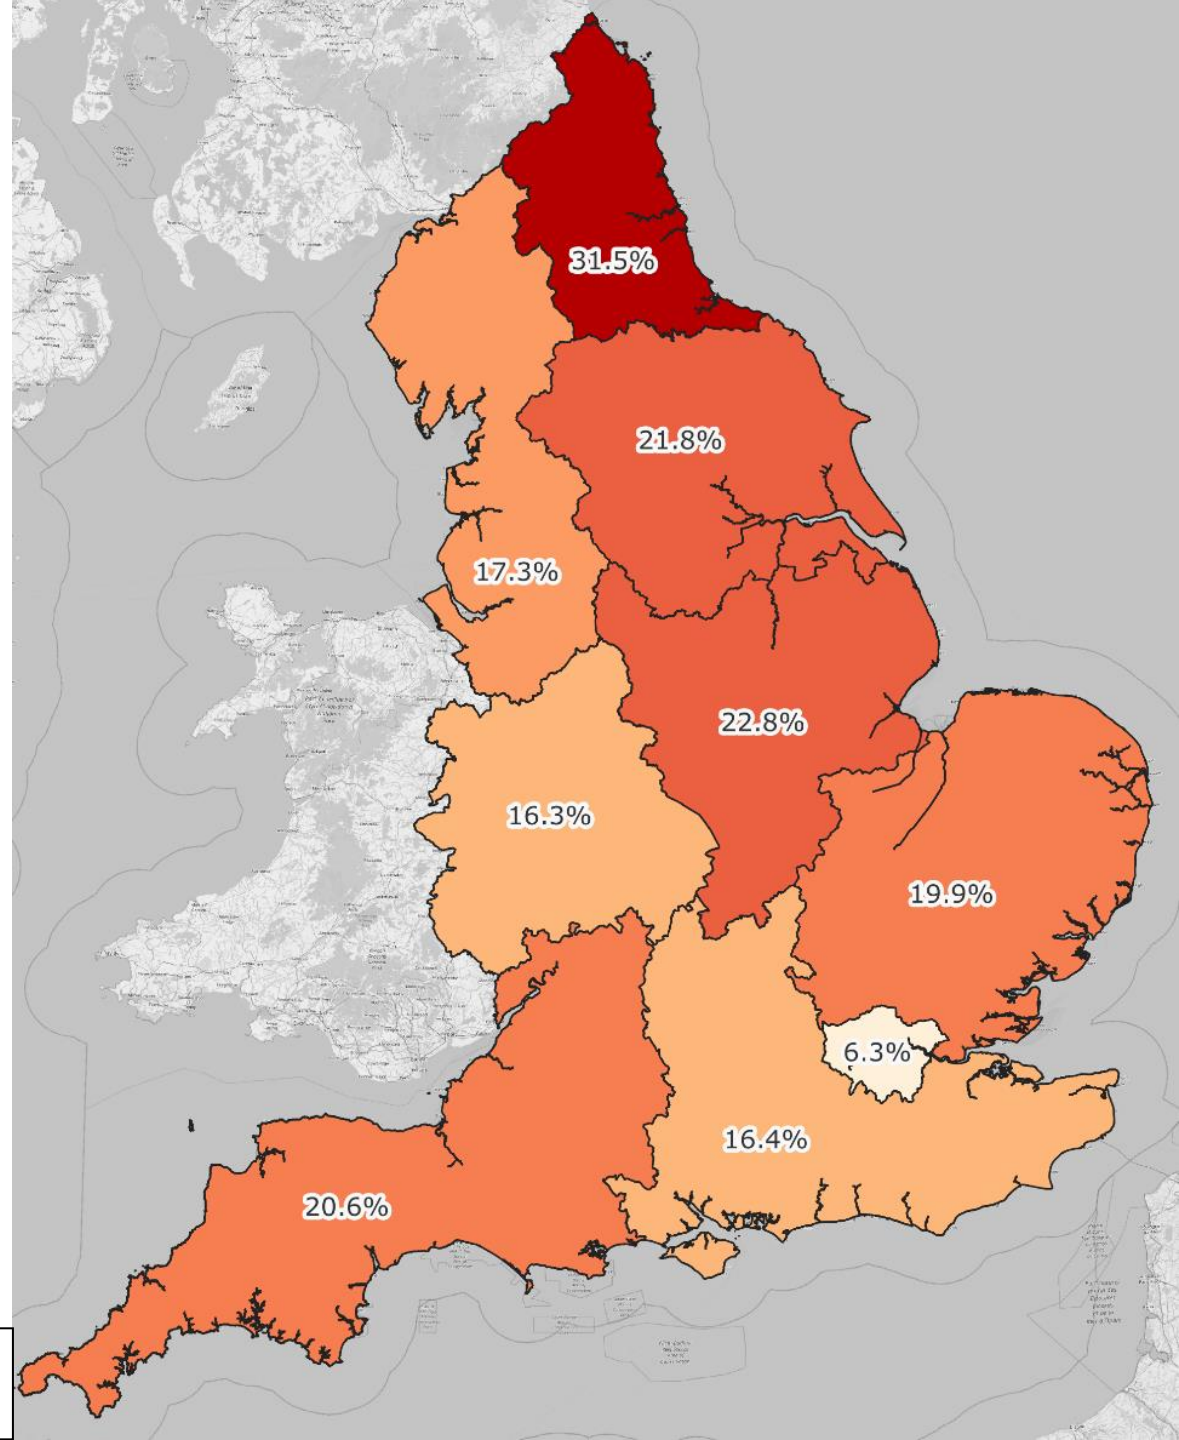

Threshold analysis; identifying LSOAs with poor accessibility alongside high vulnerability

TRSE Risk across England

TRSE Risk Category

LSOAs in the bottom three accessibility and vulnerability deciles by selected regions of England

Spatial variations

3.3 million people (21.3%) in high risk areas across the North; 16% elsewhere in England.

Concentrations in rural town & urban fringes; and cities & towns in sparse settings.

Mining & manufacturing legacy; former industrial communities particularly at risk

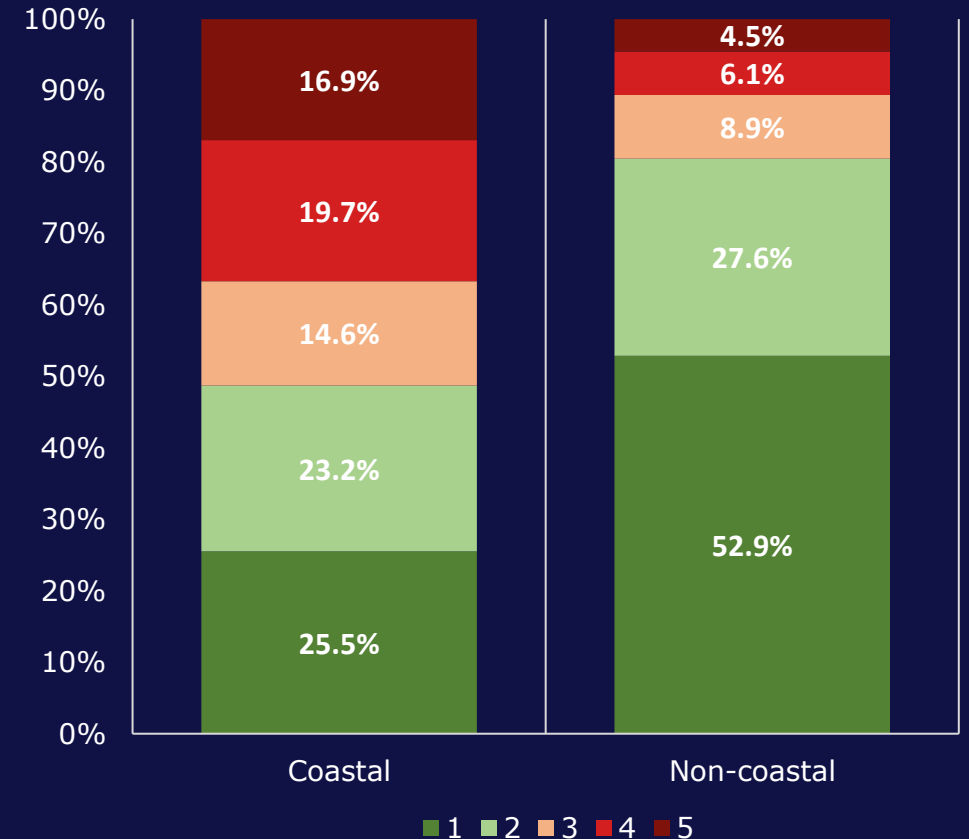

% of rural & urban LSOAs with a high risk of TRSE (categories 3-5)

Spatial variations

- 51.2% of coastal LSOAs in the North are in high risk categories
- Poor accessibility & high vulnerability across employment, education & healthcare
- Consistent across England; majority of most affected LADs are significantly coastal

Coastal & non-coastal LSOAs by TRSE risk category: North of England

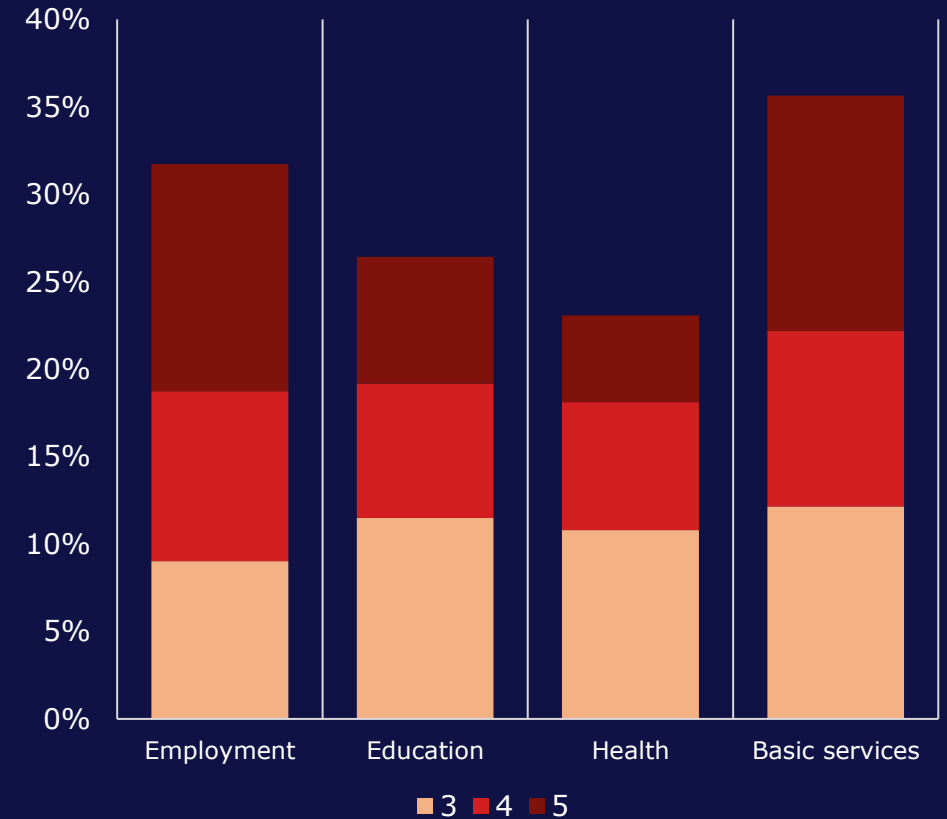

TRSE in the North East

Overall risk profile

- Significant variations between domains of TRSE
- Employment and basic services are key differentiators between the NE and other regions
- Not explained by differences in area type across regions alone; fundamental to the NE

Domains of TRSE in the North East

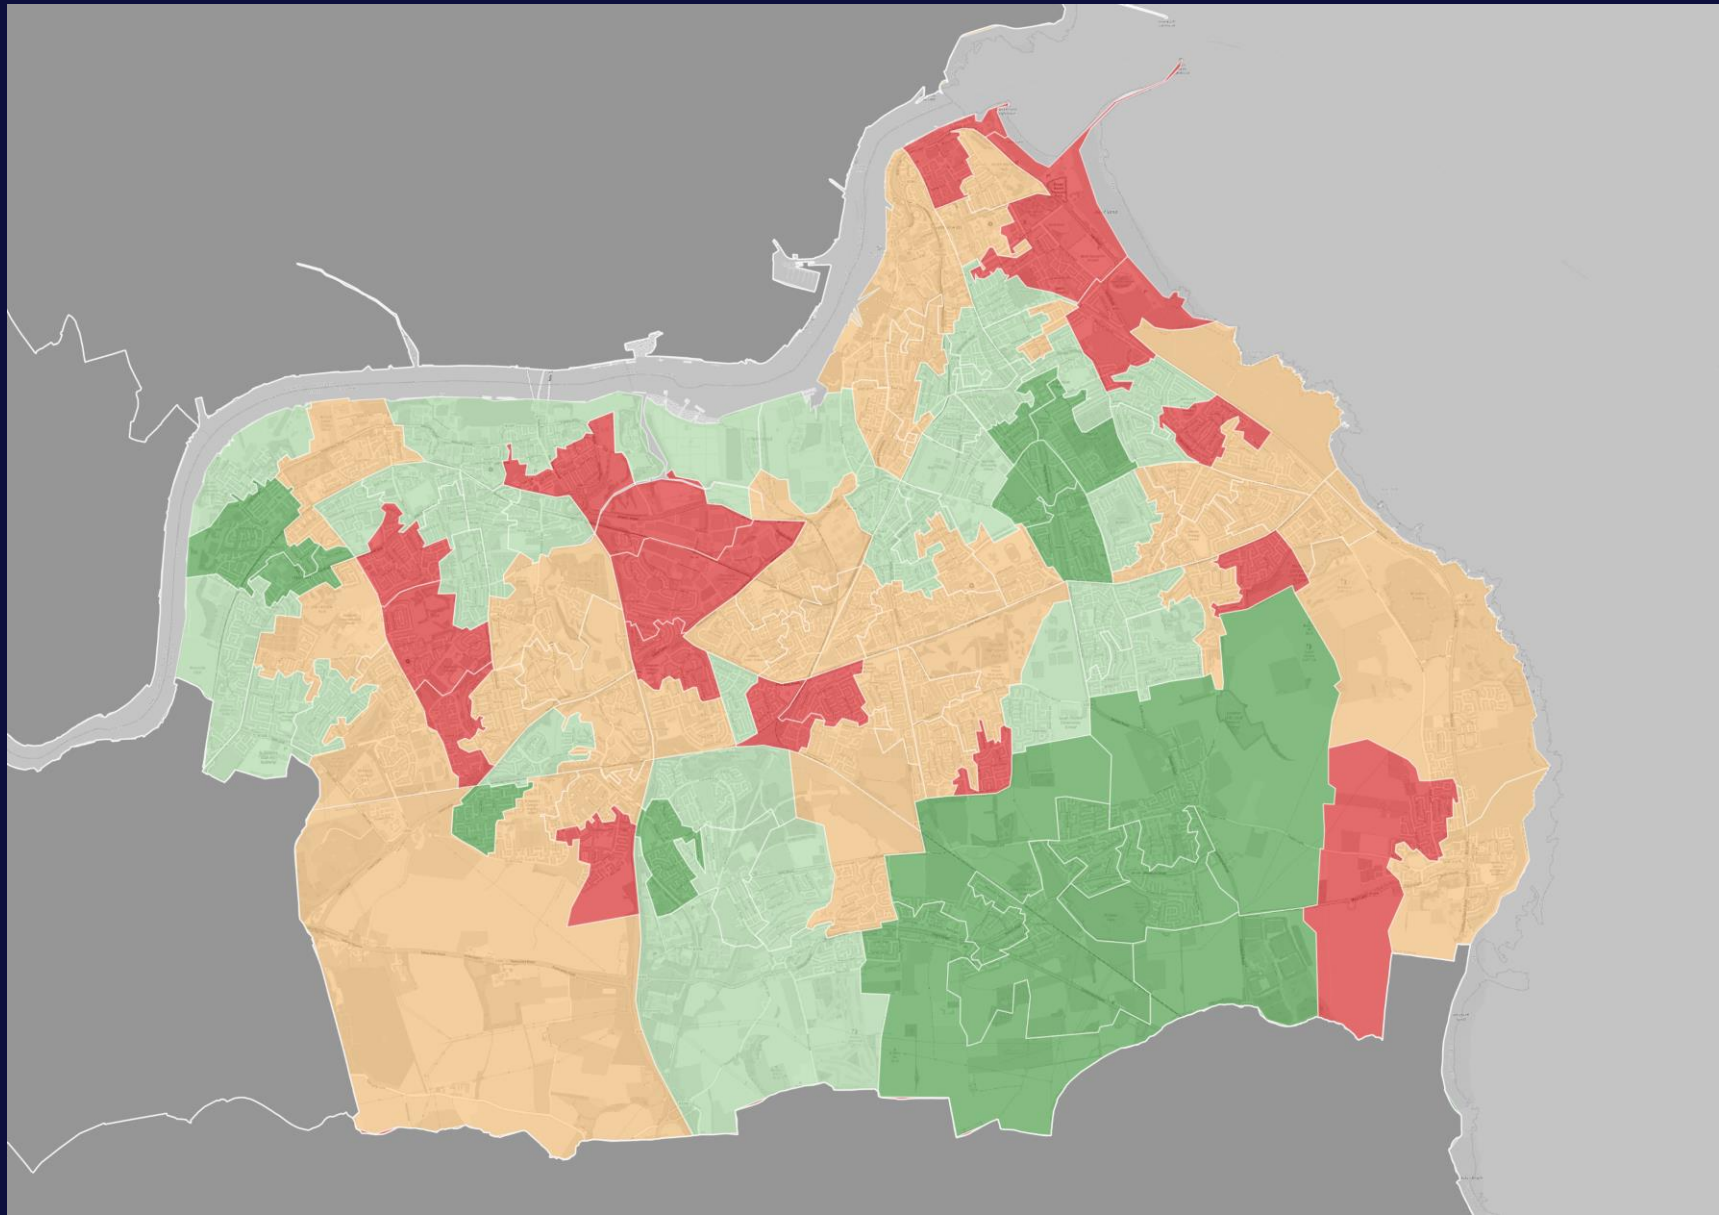

Overall TRSE Risk Category by LAD in the North East

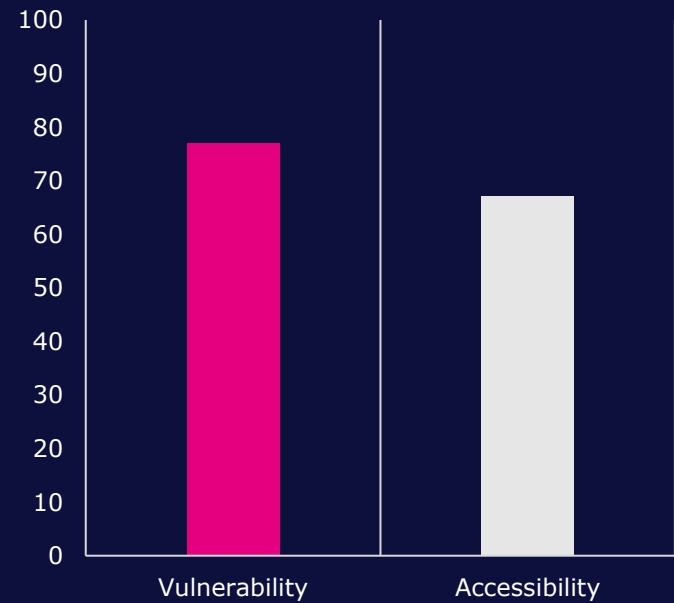

TRSE Health Risk Category by LAD in the North East

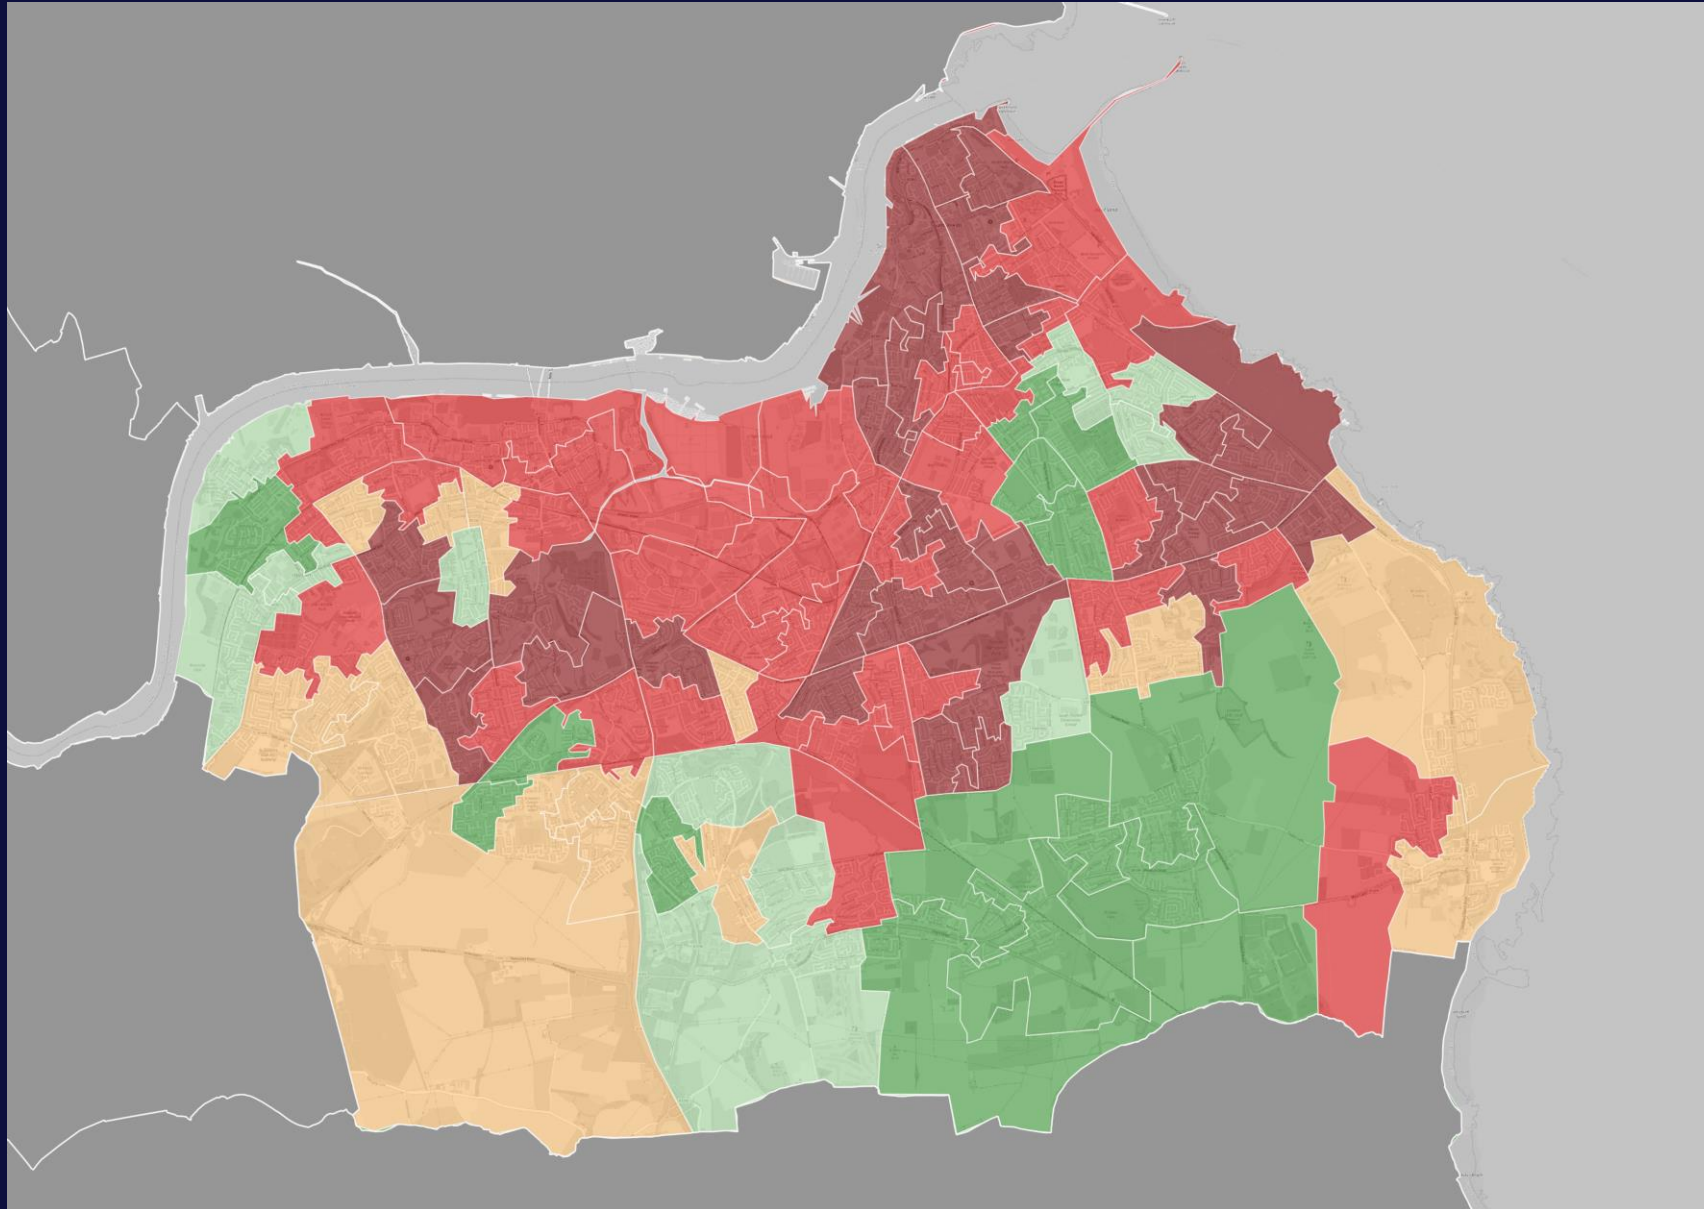

South Tyneside: Overall risk of TRSE

TRSE risk: Bottom 50%

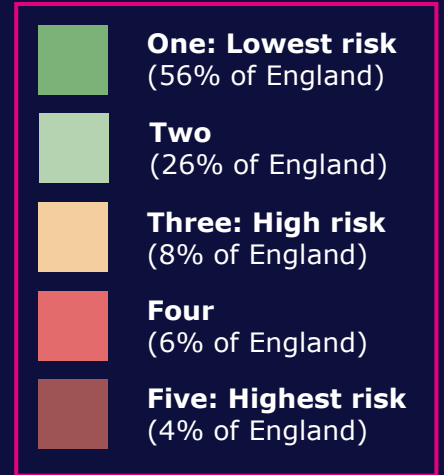

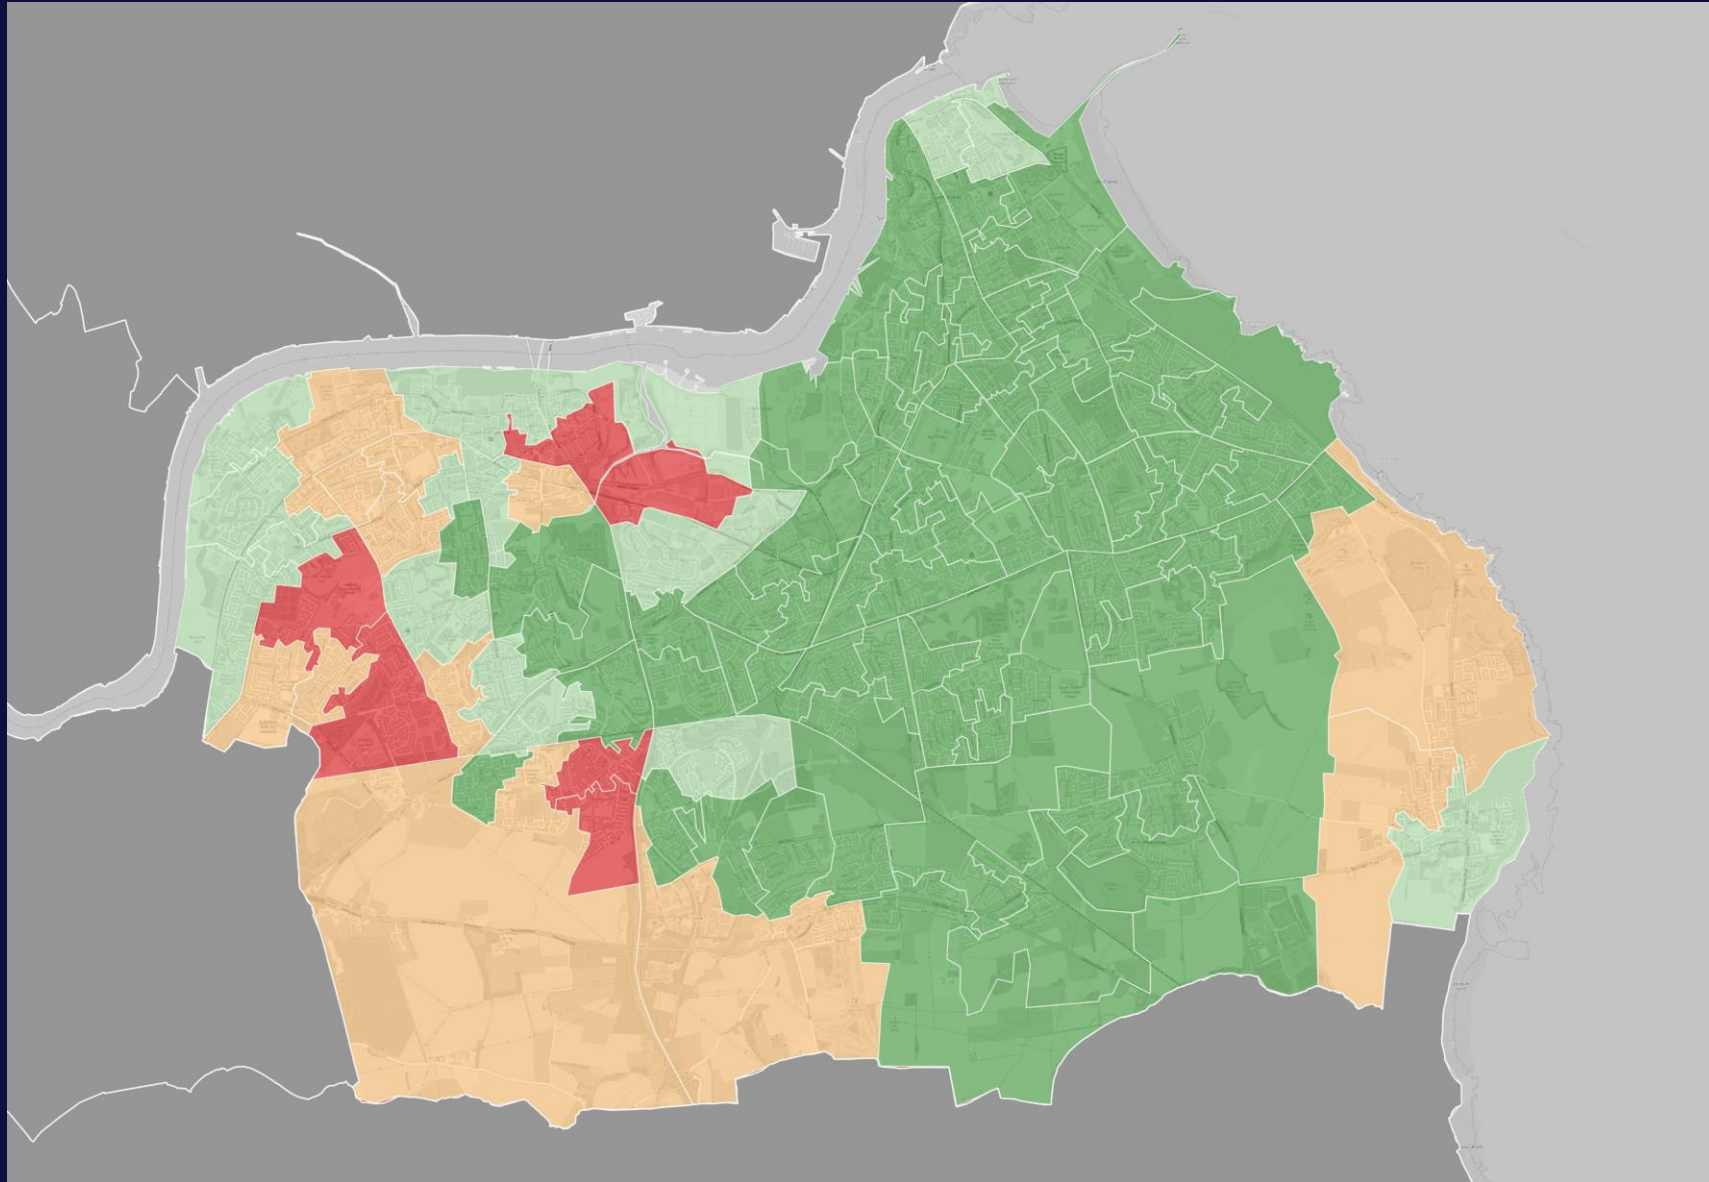

South Tyneside: TRSE linked to Employment

Employment risk: Bottom 50%

South Tyneside: TRSE linked to Health

Health risk: Bottom 50%

Solutions & Strategy

Strategy: TfN's role

- Developing the evidence, incl. monitoring TRSE across England & case study verification of TRSE tool
- Integrating inclusion metrics into TfN's Analytical Framework & contributing to NPR place-based analysis
- Developing case studies of minimum public transport service standards in different contexts
- Social inclusion checklist to support business cases

Strategy: Broader policy themes

Public transport

- Cost, coverage, integration, safety & accessibility
- Rapid & large improvements to bus services in high risk areas

Active travel

- Transforming car-dominated environments to enable AT

Car travel

- Addressing car dependency & forced car ownership
- Reducing severance & AT accessibility challenges
- Breaking the link between car access & social inclusion

What TfN can offer

- Map & data for defined areas
- Breakdowns by cause & type
- Support on interpretation & use
